

**Validation Project Manager**  
(Reference Position VPMQ204)  
Posted 08.03

**Do you like...** a challenge, autonomy on the job, the ability to make your own decisions?

**Are you...** an independent thinker, problem-solver, self-motivated, detail-oriented, flexible, adaptable, time-sensitive, friendly, professional, and fun to work with?

**Key Responsibilities:**

- Defines project scope and provides detailed proposals to the client
- Manages engineers and scientists on pharmaceutical projects involving process equipment including “advanced aseptic processes”
- Plans, schedules, and budgets all related engineering and validation work
- Reviews and approves validation protocols relating to pharmaceutical process equipment, including isolators
- Executes validation protocols if manpower resources dictate it

**Qualifications:**

- Bachelor of Science in Chemical or Mechanical Engineering
- Minimum 7 years pharmaceutical or biotech experience, preferably in a parenteral manufacturing facility.
- Minimum 3 years of project management experience
- Minimum 2 years experience with validating aseptic processing equipment – isolator systems even better!
- Background in isolation technology is desired
- Solid understanding of current GMP guidelines
- Competency with word processing and general computer skills

Employment will require worldwide travel (70%) to support current and future clients.

Advanced Barrier Concepts provides highly competitive compensation packages.

**Advanced Barrier Concepts, Inc.**      [www.advancedbarrier.com](http://www.advancedbarrier.com)

We have been a pioneer and a leader in isolation technology from the earliest stages of industry development.

■ Our ongoing process of innovation — and our ever-expanding knowledge base — continues to refine, redefine, and open up an exciting world of opportunities and abilities for all of our clients.

■ We bring a depth and breadth of personnel who offer the exceptional levels of experience and skills required to successfully lead companies through the implementation process from initial concept to regulatory approval of their advanced aseptic processes.
